

Foundations Capstone Project

Name: No More Nahs

Premise: Website used by users that need help finding a place to eat. Users are able to select filters from a drop down menu and randomize a result for where to eat. Able to add places with appropriate filters. Able to view all choices.

MVP (Minimal Viable Products):

- Database of restaurants
- Filters (add a filter, delete a filter, able to accept no filters)
- Randomly return a restaurant based on filter criteria

Features:

- All pages:
 - Navigation Bar
 - About button
 - All Options button
 - Add to Choices button
 - Generic Result button to return a cuisine instead of specific restaurant
 - Clickable Logo that redirects to home page
- Home Page:
 - Dropdown box for selectable filters
 - Add filter button
 - Section to show selected filters
 - Button to remove filters on each filter
 - Button to bring up modal
- About Page:
 - Section to explain the purpose of the site
 - Mention how the site works
- All Options Page:
 - List of all options
 - Shows filters associated with each option
- Pop-up Modal:
 - Wheel
 - Result
 - A try again button
 - Exit button to redirect back to the home page without deleting previous info

Might implement if there is time:

- Delete options
- Add custom filters
- Counter for how many times the user has been to a place

- Indicator to show where user last went

Technologies Used:

- Javascript
- HTML
- CSS
- Illustrator or alternative art program
- Figma (for mock-ups/wireframes)
